Experience

Backend Engineer at Joyce Meyer Ministries *November 2019 - Present*

- Developed internal API built on .NET Core and SQL Server to connect several microservices and websites together. This interface was responsible for facilitating the data transfer between various applications and databases.
- Automated repetitive tasks and built user interfaces for our business customers using .NET Core, JavaScript, and HTML to improve productivity and consistency.
- Built small, focused applications for reporting to service our business users using Blazor.

Product Support Specialist at Joyce Meyer Ministries *July 2018 – November 2019* ■ Supported various systems and processes across departments.

- Provided consulting for project requirements as well as inter-system integrations.
- Maintained quality assurance for system updates and releases to our website as well as our other products and services.

Call Center Representative at Joyce Meyer Ministries *April 2017 – July 2018* ■ Implement the organization's standard of excellence in customer care.

- Provided care for our customers to an exemplary standard. Primarily guided customers through placing donations and orders, as well as any questions they had along the way.

Technology Assistant at R. Williams Marketing and Technology LLC *2016 - 2018*

- Install and maintain our client's network and office technology for their productivity, convenience, and data security.
- Installed Wi-Fi networks and security camera systems, and handled minor computer repairs.
